

Dear Eddy the Trout, I really learned about
Water conservation. Water is a good thing
for us. When people pour chemicals down the
storm drain it could kill a lot of fish. I like water
because we drink it, and swim in it. and water plants
we learned about where all the sewage goes to
when we flush the toilet. And when we dump
medicine down the toilet we could really do some
damage to our water supply Eddy I will really
take care of the water and clean the river up when
it gets dirty when people dump chemicals in
the storm drain I, Jared Blanton will stop them
we will also keep the water clean or if oil
is a bad thing to be dumping down drains I
can't wait until I join you club and stop the
water pollution
from Jared
